

Technical sheet for FG35

FG 35 Multigate is suitable for leading through both low and medium power current cables as well as various types of tubing.

FG 35 Multigate is metal reinforced new type of cable gland plate made of various types of polymers. It meets the respective IP enclosure classes as it does not need separate gaskets or glands which makes it very easy to use, providing innumerable advantages in a single assembly unit.

FG 35 Multigate will lead through and seal cable as follows:

- 1 x 17-32 mm
- 16 x 10-14 mm
- 2 x 06-10 mm
- 2 x 12-18 mm
- 14 x 08-12 mm

Total of 35 cables!

FG 35 Multigate gives absolute protection against dust and spraying water from all directions.

FG 35 Multigate is suitable for both outdoor and indoor use.

The material or component is not intended to be used immersed or in continuous contact with oil.

Main dimensions for the plate:
